

Metalik

Why choose KernowJet Metalik®?

KernowJet Metalik films are designed to fulfill all requirements of the Sign and Wide-Format Printing industry. Available in three colors with two adhesive options KernowJet Metalik can be used:

- For Indoor/outdoor signage and lettering on glass and any smooth substrate
- As a metallic digital printable film for retail decoration
- As a reflective wallcovering solution
- For 3-D labels/doming
- For lamination on boards and rigid substrates
- For pre-production packaging mock-ups and so much more

Metalik®

Certified for
HP Latex Inks

Tip:
Combine CAD
and print to create
engaging stickers
and lettering

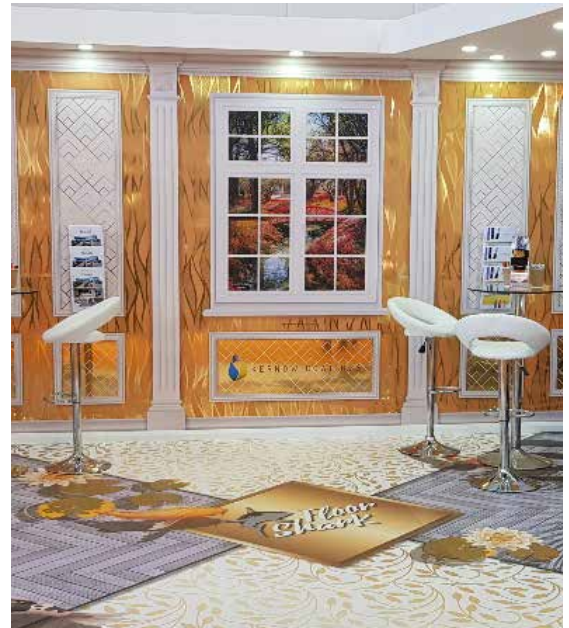

The Wide-Format industry finally has a suitable solution for all projects including metallic films from retail stores to interior designers. KernowJet Metalik can be applied or laminated manually or mechanically, with wet or dry application techniques. Applied to perfectly smooth substrates like glass, the films have a mirror look finish. On demand, we can create specific metallized colors in different shades, for example metallic red, blue, and green. Imagination is your only limit.

KernowJet Metalik Cut&Print

With a both sides matching mirror look finish and color, Metalik Cut&Print is ideal for creating eye-catching window displays. The removable adhesive is suitable for short-term decoration. With larger areas or wherever it is more convenient, the film can be wet applied.

KernowJet Metalik Inkjet

With its permanent high-tack adhesive, KernowJet Metalik Inkjet is your perfect partner for lamination on a extensive range of smooth substrates or can be used for wallcoverings. It is ideal for 3-D labels/doming applications and a wide variety of permanent applications. The back of the film is silver regardless of the front-face color.

Products

Product	Thickness mils (microns)	Width inches				Length feet	Adhesive after 24hrs	Printability
		24"	30"	54"	60"
